

# The History of the Development of the QXCI

---

## **1969 – Prof. Nelson works on the Apollo Project.**

- He learns the value of Electronics and tri-vector shape theories of topology.
- The Gyro Navigation System teaches him about the multiple vectors of shapes.
- His work on Apollo 13 is essential in helping the astronauts reset the navigation system for re-entry.

## **1976 – Whilst at Medical school Prof. Nelson realizes the dominance of synthetic substances in the medical field.**

- Prof. Nelson's psychic research and quantum subspace theories lead to international acclaim.
- In Youngstown - Ohio, the first studies of reactivity show the power of the volts and amps of the body reactivity and how inaccurate skin resistance measurements are.
- Prof. Nelson teaches mathematics and the value of statistics, Fourier analysis and vector calculus.

## **1979 - Professor Nelson learns the value of energetic medicine.**

- The fractal systems such as the human body do not repeat.
- A person cannot step into the same stream twice.
- The power of the subtle and small.
- Healing is subconscious and non-lineal.

## **1979 – With his experience in electronics Prof. Nelson sees the mistakes in electro-acupuncture.**

- Voltage, amperage, resonant frequencies, capacitance, inductance and reactance are far superior values for energetic medicine.
- The biological speed of reactivity is closer to 100<sup>th</sup> of a second.
- A therapist can vary the speed of delivery in a point probe and thus, modify the results.
- Science and Math are a must in alternative medicine.

**1982 – Prof. Nelson develops the first Tri-vector system for diagnosis.**

- He assembles the tri-vector analysis on 1000's of homeopathic substances.
- He measures the resonant frequencies of the acupuncture points.
- He develops the Fourier analysis algorithms for reactivity.
- He begins to put together the puzzle of the tri-vector cybernetic link

**October 1989 – Prof. Nelson registers with the FDA a biofeedback unit without therapy.**

- Prof. Nelson undertakes a 200 hour course about preparing documentation for the FDA.
- The EPM (Electro Physical Feedback Method) is registered as a unit of feedback without therapy.
- Much time and energy were required in order to file the first registry of a system that could do diagnostics of electro-acupuncture.

**1989 to the 90's – The registered EPM is sold to many therapists.**

- One of the sales agents, Bob Eanes, has difficulties understanding dynamics of fractal and subspace.
- What Bob really wants is to establish his own venture.
- With little information he leaves and sets up his own company: 'Avatar'.

**1992 - The FDA informs Professor Nelson that they have limits on future registration**

- A device to detect the abnormalities of the body electric and to test the body electric can be registered...
- ... But a device that can detect electric abnormalities and then correct them at biological speeds cannot be registered.
- Fortunately, the USA government allows importation of medical systems registered in other countries.

**1993 - To further his dream Prof. Nelson seeks foreign support.**

- The Hungarian government supports Prof. Nelson's work.
- He moves to Budapest where he works with Gabor Lednyczky.

- Prof. Nelson only shares part of his research because Prof. Lednyczky cannot accept certain ideas about fractal dynamics and quantum theory.

#### **1994 – Market hostilities take place.**

- Prof. Nelson y Prof. Lednyczky have disagreements about the price of the system.
- Nelson wants to charge 12.000 USD, whilst Lednyczky pretends 50.000 USD per system.
- After selling several devices at 50.000 USD Lednyczky decides he won't share it with Nelson.

#### **1995 – The dream comes true!**

- Both the American and Lednyczky's systems use analogic to digital converters.
- In a dream Prof. Nelson solves the vector problems and a system is possible without the converters.
- This results in a cheaper device far more accurate, as 'translation' is not required.

#### **1995 – The difficulty lies in the need of a competent computer programmer.**

- In the past, Prof. Nelson always hired programmers but this always generated problems because of their lack of perspective assembling the programs.
- In a sudden decision Prof. Nelson starts learning programming.
- Within four weeks he is ready to start.
- A month later, the first version of the QXCI is presented.

#### **1995 - A Cybernetic link is possible**

- A device must be made to calibrate the patient's reactance speed, reactivity and test 1000's of items at biological speeds.
- The device must be able to do energetic medicine such as Rife, Bicom, Mora, bio-resonance, etc.
- A Cybernetic link must be established between the device and the patient.

#### **1995 – The cybernetic link is a reality.**

- Thanks to the New Technologies, such link is no longer a dream...

- ... In the same way that supersonic flights are possible because of the invention of the turbines.
- It allows auto focusing therapy and self-adjustment treatment for maximum results and efficacy.

### **The Present**

- The QXCI is with difference the best and largest software in alternative medicine in the market today.
- Over 4.000 units have been sold Worldwide and demand surpasses manufacturing.
- More than ever, Prof. Nelson is invited to lecture in many countries about alternative medicine, chemistry, physics and quantum biology.

### **The Present**

- Many Web sites in the Internet and discussion groups speak about the excellent results obtained in diagnostic and therapy with the QXCI.
- Budapest is rapidly becoming a corner stone to professionals all over the World as the city of the QXCI.
- Always pursuing new challenges Prof. Nelson is already completing his next breakthrough project: The SCIO

*To be continued...*
